

BUCK SELF RESCUE

NOW WITH TWO DESCENDERS FOR DUAL-MAN BUCKETS

Two Pairs of Rappelling Straps

Can be easily installed on any harness not incorporating rappelling straps.

Weather Resistant Bag

Material withstands 40cal/cm2 electric arc exposure

TVAC Descent Line

6.8mm descent line that stands up to heat on long descents

Two Aluminum Descenders

Allows for self rescue of up to two workers.

Two-Man Bucket Self Rescue System

301SRKQ2-65

The 301SRKQ2-65 has all the benefits of the lightweight and compact 301SRK-65, but includes two descenders for use in situations where two workers are aloft and the need for self rescue arises.

Unit features a lightweight, compact design, and 2 lightweight descenders

manufactured from aircraft grade aluminum. The anti panic release brake stops the descender if the user releases or compresses the descender all the way. The 6.8mm TVAC descent line stands up to heat on long descents. Includes two pairs of rappelling straps that can be easily installed on any style harness.

The entire system is conveniently packed in a weather resistant bag that will stand up to an electric arc flash. Single man rescue rated to 310lbs. Two man rescue rated up to 440lbs. Meets ANSI Z359.4 requirements.

***Bag Material withstands 40cal/cm2 electric arc exposure.**
